

## RE: Quote for Sprinkler Installation

Dear Homeowner,

Attached is the estimate you requested for a sprinkler system for your home.

Here are a couple of notes:

- 💧 Alternate Rain installs “self-draining” sprinkler systems which allows the Homeowner to winterize their own system. While the sprinkler system is self-draining, the back flow preventor must still be winterized prior to the first freeze. You do NOT have to pay someone like us to “blow out” the sprinkler system every fall. We provide simple instructions for you on how to start-up and winterize your sprinkler system. If you prefer, you can schedule a service call for us to winterize your system.
- 💧 During installation of the sprinkler system, the number of sprinkler heads may be adjusted slightly. The price will remain as quoted. We ensure adequate turf coverage with our design. Sprinkler system design is not intended to adequately cover landscaped areas. If you would like to add additional heads or drip lines for your landscape areas, please inquire with our managers.
- 💧 Your sprinkler control clock will be installed in your garage unless noted otherwise. There is a video on our website on how to work the control clock. Our technician will “run through” the system with you upon completion. If you are not available then, we can schedule an appointment to run through the system and collect payment. Payment is due upon completion.
- 💧 If you have any questions, you can always reach us by email, text, or phone.

Let us know if you have any questions.

Thank You,

Alternate Rain
