

► Saves Water

Independent testing shows a Rain Sensor offers 30-35% water savings over basic irrigation controllers.

► Prevents Over-watering

Turns the irrigation system off during rain and low temperatures. Sensor prevents it from turning back on until irrigation is needed.

► Years of Trouble-free Service

UV protected plastics and internal antennas ensure reliable operation.

WR2 Series Wireless Rain / Freeze Sensors

Save water and promote healthier landscapes!

Rain and rain / freeze sensors are becoming “must have” components for irrigation systems. Rain Bird designed the WR2 wireless rain sensor to exceed the standard.

Reliable signal transmission and other innovations deliver superior responsiveness to weather conditions. Programming is accomplished using only four buttons, while reading and understanding the LCD display is simplified through the use of intuitive icons.

Choose your own rainfall or low temperature set points and save up to 35% on water usage while promoting lush, beautiful landscapes.
